Sequence 79, Application US/11052554A
Publication No. US20050288866A1
GENERAL INFORMATION:
APPLICANT: Sachdeva, et al.
TITLE OF INVENTION: COMPUTATIONAL METHOD FOR IDENTIFYING ADHESIN AND ADHESIN-LIKE
TITLE OF INVENTION: PROTEINS OF THERAPEUTIC FOTENTIAL
FILE REFERENCE: 30853/40359A
CURRENT APPLICATION NUMBER: US/11/052,554A
CURRENT FILING DATE: 2005-02-07
PRIOR APPLICATION NUMBER: US 60/589,227
                                                                                                                                                                                                                                APPLICANT: Sachdeva, et al.

Claim 5; Page 8-9; 49pp; English.

The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 5SM3. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The includes a number of compositions and vaccines for dental caries. The compositions comprise major histocompatibilty complex (MHC) caries. The compositions comprise major histocompatibilty complex (CHC) covalently linked with peptides upbunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiplicationspeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in

                                                                                                               The invention relates to a composition comprising a fragment of a gl binding protein-B (GbpB) and a biocompatible microparticle, where th fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                       Length 431;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         360
                                                                                                                                                                                                                                                                                                    The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 3VF4. The sequence includes a number of human leucocyte antigen (HAA)-binding epitopes. The includes a number of mann leucocyte antigen (HAA)-binding epitopes. The caries. The compositions compositions and vaccines for dental class II protein-binding GbpB peptides, especially HAA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against WHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QVSALQTQQAELQAENQRLEAQSATLGQQIQTLSSKIVARNESLKQQARSAQKSNAATSY 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TIAQNTNALNTOGAQLEAAQLNLQAELTTAQDQKATLVAQKAAAEEAARQAAAAQAAAEA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a composition comprising a fragment of a glbinding protein-B (GbpB) and a biocompatible microparticle, where th fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain SK32. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The includes a number compositions and vaccines for dental caries. The compositions comprise major histocompatibility complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                                                                                                                                                                      binding protein-B (GbpB) and a blocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

life present interaction and adhearn-like proteins, by computing the sequence-
based attributes of protein sequences using five attribute modules of a
cerval network software, training an artificial neural network (ANN) for
each of the computed five attributes, and identifying the adheain and
adhesin-like proteins having probability of being an adhesin and
cequal or greater than 0.51. Also claimed is a set of 274 annotated genes
encoding adhesin and adhesin-like proteins, having 274 fully defined 162-
1151 base pair (SEQ ID NO: 385-658) sequences; a set of 105 hypothetical
genes encoding adhesin and adhesin-like proteins, having 105 fully
ceffined 306-15876 base pairs (SEQ ID NO: 659-763); a set of 279 annotated
adhesin and adhesin-like proteins, having 279 fully defined 53-3716 base
pair (SEQ ID NO: 1-279); a set of 105 hypothetical adhesin and adhesin-
Ike proteins, having 105 fully defined 106-5291 base pair (SEQ ID NO:
280-384) sequences; and a fully connected multilayer feed forward ANN (I)
based on (MI). (MI) is useful for identifying adhesin and adhesin-like
proteins, of therapeutic potential, and identifying and short-liking
proteins for further testing in development of new vaccine formulations
to eliminate diseases caused by various pathogenic organisms. (MI) is
useful for identifying putative adhesins that are important in drug

                                                                                                                   The present sequence is the protein sequence of the glucan binding protein.B (GbpB) of Streptococcus mutans strain 15JP2. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions compositions and vaccines for dental (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against WHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

                                                                                                                                                                                                                                                                                            The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                          New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing
                                                                                                                                                                                                                                                                                                                                                                                                                                   9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the protein sequence of the glucan binding protein-B (GbpB) of Streptococcus mutans strain 3SN1. The sequence includes a number of human leucocyte antigen (HLA)-binding epitopes. The invention provides immunogenic compositions and vaccines for dental caries. The compositions comprise major histocompatibity complex (MHC) class II protein-binding GbpB peptides, especially HLA-binding peptides, covalently linked with peptide subunits of a glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New composition comprising a fragment of a glucan binding protein-B (dpbB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.

Streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antilnflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to determine whether a compound binds to biological sample. (I) is used to determine whether a compound binds to used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                336

vector comprising the nucleic acid molecule; a host cell comprising the vector; a hyperimmune serum-reactive antiquens of consisting of eig., 85, 299, 467 or 812 amino acids; fragments of hyperimmune serum-reactive antiquens consisting of peptides comprising e.g., 76, 134, 221 or 576 amino acids; consisting of peptides comprising e.g., 76, 134, 221 or 576 amino acids; consisting of peptides comprising e.g., 76, 134, 221 or 576 amino acids; captive antiquens erum-reactive antiquens a process for producing a cell that expresses a S. agalactiae hyperimmune serum reactive antiquen; a pharmaceutical composition, especially a vaccine, comprising the hyperimmune serum-reactive antiquen; a nucleic acid molecule; an antibody that binds at last to a selective part of the hyperimmune serum-reactive antiquen; a method for identifying an antagonist capable of binding to the hyperimmune serum-reactive antiquen; a method for identifying an antagonist capable of reducing or inhibiting the interaction activity of a hyperimmune serum-reactive antigen; a method for identifying an expected or process for in vitro diagnosing or inhibiting the interaction activity of a hyperimmune serum-reactive antigen to its interaction activity of a hyperimmune serum-reactive antigen to its interaction activity of a hyperimmune serum-reactive antigen to its interaction activity of a nucleic of a bacterial infection, especially a S. agalactiae infection. The hyperimmune serum reactive antigen is useful for solutional ribonucleic cacid molecule; hyperimmune serum reactive antigen, an interaction partner of a functional nucleic acid comprising apteners or spiegelmers. The nucleic acid comprising apteners or spiegelmers. The nucleic acid comprising apteners or spiegelmers. The nucleic acid comprising apteners or spiegelmers. The nucleic acid comprising apteners or spiegelmers or siRNA, The nucleic acid molecule, hyperimmune serum reactive antigen or antibody is untisense nucleic acid sequence of a Streptococcus agalactiae process for the mannifacture
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    INAIINSKSVSDAINRVSAIREVVSANEKWLQQQEQDKAAVEQKQQENQAAINTVAANQE 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an isolated nucleic acid molecule encoding a hyperimmune serum reactive antigen or its fragment. Also described are: a vector comprising the nucleic acid molecule; a host cell comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 QVSALQTQQAELQAENQRLEAQSATLGQQIQTLSSKIVARNESLKQQARSAQKSNAATSY 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid molecule encoding a hyperimmune serum reactive antigen, useful for the manufacture of a vaccine against Streptococcus agalactiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MKKRILSAVLVSGVTLSSATTLSAVKADDFDAQIASQDSKINNLTAQQQAAQAQVNTIQG

                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel Streptococcus agalactiae nucleotide sequences (I; ADV87607-ADV87745) and novel polypeptides (II; ADV87746-ADV89950). The nucleotide sequences encode polypeptides of S. agalactiae involved in the synthesis of amino acids, cell membranes, intermediate (central) metabolism, energetic metabolism, fatty acid and primidines and/or nucleotide metabolism including purines, pyrimidines and/or nucleotide metabolism including purines, pyrimidines and/or nucleotide metabolism including purines, conditions, sensitivity to medicines and/or analogues, functions related to transposens, biosynthesis of cofactors, prosthetic groups and to transposens, biosynthesis of cofactors, prosthetic groups and transporters, cell membrane proteins and cellular machinery. (I) are useful for the detection and/or amplification of nucleic acids. Pharmaceutical composition comprising (I) or (II) are useful for treatment of a bacterial S. agalactiae infection. Note: WO200292818AZ is

                                                                                                                                  The present invention relates to novel Streptococcus agalactiae

nucleotide sequences (1; ADV78860-ADV78998 and ADV83341-ADV85476) and

nucleotide sequences (1; ADV78860-ADV78998 and ADV83341-ADV85476) and

nucleotide sequences encode polypeptides of S. agalactiae involved in the

synthesis of amino acids, cell membranes, intermediate (central)

c synthesis of amino acids, cell membranes, intermediate (central)

c mclaotide metabolism including purines, pyrimidines and/or nucleosides,

regulatory functions, replication, transcription, translation, protein

transport, adaptation to atypical conditions, sensitivity to medicines

c and/or analogues, functions related to transpoons, biosynthesis of

cofactors, prosthetic groups and transporters, cell membrane proteins and

cellular machinery. (1) are useful for the detection and/or amplification

of nucleic acids. Pharmaceutical composition comprising (1) or (11) are

useful for treatment of a bacterial S. agalactiae infection. The complete

genome of Streptococcus agalactiae is given in ADV81204. Note: The

present patent is an equivalent for the basic patent FR2824074A1, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    58.8%; Score 1238; DB 8; Length 447;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
